**AMERICAN ASSOCIATION OF FELINE PRACTITIONERS RELEASES NEW *FELINE ANESTHESIA GUIDELINES*  
TO THE VETERINARY COMMUNITY**

***First exclusive Feline Anesthesia Guidelines authored by an expert panel aim to make anesthesia and sedation safer for the feline patient***

**[HILLSBOROUGH, NJ – July 10, 2018]** The American Association of Feline Practitioners (AAFP) today released the first Feline-specific Anesthesia Guidelines to the veterinary community, which are published in the *Journal of Feline Medicine and Surgery*. General anesthesia is an essential component of feline practice, without which surgery and certain other treatment modalities and diagnostic procedures would be impossible. These Feline-focused Guidelines are vital to cat health. Due to their unique physiology and small size, cats undergoing anesthesia are at a relatively greater risk of complications and mortality than many other species. Empirical evidence shows that cats undergoing anesthesia have a higher mortality rate compared with dogs.<sup>1,2</sup>

Relying on a standardized, evidence-based approach for administering anesthesia is especially useful for ensuring the patient's safe and predictable perioperative response and recovery. These Guidelines address specific causes of disparities and ways of avoiding perioperative complications associated with monitoring, airway management, fluid therapy, and recovery. Additionally, the Guidelines discuss other important aspects of feline anesthesia, including perianesthetic anxiety and stress, perianesthetic monitoring by physical and electronic means, the role of underlying diseases such as hypertrophic cardiomyopathy (HCM), the correct use of anesthesia equipment, and total injectable anesthesia. Content has been organized in the following areas: use and care of equipment, preanesthetic assessment, comorbidities, critical patient emergencies, anesthesia and sedation, perioperative complications, and anesthesia recovery.

“The overarching purpose of the AAFP Anesthesia Guidelines is to make anesthesia and sedation safer for the feline patient. We are committed to improving the health and welfare of all cats and providing this resource to veterinary teams is an important milestone,” said Heather O’Steen, CEO of the AAFP.

The Guidelines were authored by an expert panel and include visuals and other information designed to minimize risks associated with anesthesia; namely, tables, charts, and algorithms that are very useful resources for veterinary teams. These invaluable tips and techniques for the practice team start even before the patient leaves home and goes through the critical recovery period. The associated client brochure provides cat caregivers with digestible information that enables them to understand anesthesia, what to expect, properly prepare their cat for a procedure, and care for them during recovery ([catfriendly.com/anesthesia](http://catfriendly.com/anesthesia)).

“By proactively developing an individualized anesthetic plan that considers the uniqueness of each feline patient and recognizing that ‘one size does not fit all,’ the experience for the cat can be improved and the outcome successful. It is our hope that these Guidelines will become the practice’s go-to resource and each team member will have a new awareness of all the tools and techniques available to them,” in a joint statement, said Guidelines Co-Chairs Susan M. Gogolski, DVM, PMP, DABVP (Canine/Feline) and Sheila A. Robertson, BVMS (Hons), PhD, DACVAA, DECVAA, DACAW, DECAWBM (WSEL), MRCVS.

It is recommended that these Guidelines – endorsed by the International Society of Feline Medicine (ISFM) – be used in conjunction with other previously published guidelines (freely accessible at [catvets.com/guidelines](http://catvets.com/guidelines)), such as those on feline friendly handling, feline friendly nursing care, senior care, pain management, and fluid therapy, as they each contain specific information that should be considered when sedating and/or anesthetizing cats. The Anesthesia Guidelines and associated supplemental resources are available for download on the AAFP website ([catvets.com/anesthesia](http://catvets.com/anesthesia)) so practice teams can easily retrieve, print, and laminate them for quick reference. They can also be attached to anesthesia machines and displayed on walls in the preparation, surgery, and recovery areas.

### **About the American Association of Feline Practitioners**

The American Association of Feline Practitioners (AAFP) supports its members in improving the health and welfare of cats through high standards of practice, continuing education, and evidence-based medicine. As a trusted leader in the veterinary community, the AAFP has a long-standing reputation and track record for facilitating high standards of practice and providing educational resources to veterinary teams, including guidelines for practice excellence and an annual conference. Over the years, the AAFP has encouraged veterinary professionals to continuously re-evaluate preconceived notions of practice strategies in an effort to advance the quality of feline medicine practiced. Launched in 2012, the Cat Friendly Practice® (CFP) program ([catvets.com](http://catvets.com)) was created to improve the treatment, handling, and overall healthcare provided to cats. Its purpose is to provide veterinary practices with the tools and resources to reduce stress associated with the visit and elevate the standard of care provided to cats. With the belief that cat caregivers are instrumental to feline health and welfare, in 2017, the AAFP launched [catfriendly.com](http://catfriendly.com), a consumer-focused reliable educational resource.

### **About the *Journal of Feline Medicine and Surgery***

The [\*Journal of Feline Medicine and Surgery\*](#) is the official journal of the [AAFP](#) and the [ISFM](#) and is published in partnership with SAGE. All AAFP and ISFM and guidelines are free to access and download from [guidelines.jfms.com](http://guidelines.jfms.com).
